

Product Description

The Gyford StructureLite C-Channel Extrusion is supplied in standard sized 1.25" wide x 2.125" high x 100" long 6063-T5 aluminum bars that are clear anodized. The C-Channel hardware system is typically used for floor to ceiling panels and is compatible with any 3/8" substrates, but can also be used with half wall panels, artwork & more.

Finishing Options

Standoff Caps

The panels are held in place with set screws, and can be finished with a satin chrome standoff cap to cover the set screw.

Unfinished End

End Caps

End caps can be added to cover the end of the channel to create a finished end. The exposed ends of the C-Channel are covered with stainless steel adhesive caps.

Finished with End Cap
