(Available in 1/8")

Brushed Aluminum Dibond
(Available in 1/8")

Product Descriptions

Acrylic with White Back This premium-grade acrylic resists fingerprints, scratches, and smudges. It is also affordable, lightweight and easy to clean. This is a great choice if you desire bright, crisp images with color that really pops.

Non-Glare Acrylic This high performance acrylic has a distinct matte, non-glare finish that diffuses surface reflections and hides imperfections.

Buried Print Polycarbonate offers a unique combination of toughness with exceptional impact strength. It exhibits high optical clarity, and high temperature resistance. It also has a textured overlaminate for added protection, durability and abrasion resistance.

Sintra This is our least expensive option. It is great indoors with an excellent print. At 1/8" it is Class A Fire Rated, but it also comes in a wide range of thicknesses. Available in white or black depending on what edge color you prefer. White Sintra is produced with a direct print, while black Sintra uses a printed vinyl with overlaminate protection and is a higher price point.

Stretched Canvas We use premium inks for brilliant color and extend your image over every side of the canvas to create a beautiful piece of art. Each canvas print is hand-stretched over museum-quality stretcher bars.

Acoustical Improve noise reduction while providing a visual aesthetic. Our acoustical art panels are 2" inch thick and offered in three standard sizes. They are Class A Fire Rated.

Dibond® Made of aluminum with a plastic core. It is a very durable, long lasting option for indoor or outdoor artwork. Dibond® also has a Class A Fire Rating.

Brushed Aluminum Dibond® Dibond® with a brushed aluminum decorative finish.
