

White Ink Custom Options

The gradient on our White Ink Custom Options can be adjusted to achieve the desired level of privacy required for your space and application. White Ink can be printed on Crystal or Etch film, increasing the options and allowing for various levels of privacy. The higher the gradient level, the more opaque the ink is. 100% gradient allows no visibility through the ink and is 100% opaque. As the gradient level decreases, more visibility through the ink is achieved. The scale below is representative of the high level of privacy you can achieve with White Ink - the rendering is for illustrative purposes only and actual appearance will vary depending on the light source, background colors and images. Please contact your Olee representative for samples that can show you exactly what can be expected with our White Ink Custom Options.
